```
The present sequence is the fusion protein construct, IgkappaLsolCD39.

This construct comprises of the leader peptide from human immunoglobulin Ig kappa, linked to the soluble CD39 (solCD39) protein region by few residues derived from human interleukin 2 (hIL2). SolCD39 has apyrase activity and is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP induced platelet activation and recruitment, including platelet adgregation. Soluble CD39 polypeptides are useful for inhibiting agregation. Soluble CD39 polypeptides are useful for inhibiting agregation, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preeclampsia, platelet—sasociated ischaemic disorders including lung, coronary and cerebral ischaemic disorders including coronary, peripheral and cerebral artery thrombotic disorders including coronary, peripheral and cerebral artery thrombotic disorders including coronary, peripheral and cerebral artery thrombotic disorders including coronary, peripheral and cerebral schaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, recoclusion, stenosis or restenosis of blood vessels or stroke
unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-associated ischaemic disorder; thrombotic disorder; reocclusion; coagulopathy; deep vanous thrombosis; DVT; pulmonary embolism; PE; thrombus formation; occlusion; stenosis; restenosis; angiogenesis; antianginal, cerebroprotective; antiarteriosclerotic; anticoagulant; cardiant; vasctropic; thrombolytic; inhibitor; interleukin 2; IL2; Ig; immunoglobulin kappa.
                                                                                                                                                                                                                                                                                                                                                    21. .24

AAY70922
ID AAY70922 standard; protein; 464 AA.
              The present sequence is the protein encoded by IgkappalsolCD39 construct.
This is used for transient expression of soluble(sol)CD39 in recombinant
cells for determining enzymatic activity and platelet inhibitory activity
for each protein product. SolCD39 is used in the treatment of unstable
angina, myocardial infarction, stroke, coronary artery disease or injury,
atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism,
platelet-associated ischaemic disorder including lung ischaemia, coronary
cischaemia and cerebral ischaemia, thrombotic disorder including scoronary
artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis,
peripheral artery thrombosis, venous thrombosis, plumonary embolism (PB);
cransient ischaemic attack. Soluble CD39 is also useful for preventing
thrombus formation or reformation, occlusion, reocclusion, stenosis or
crestenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      122

The present sequence is the fusion protein construct, pIL2LTriml. This construct comprises of the leader peptide from human interleukin 2 (hIL2) and soluble CD39 (solutor) system as a civilate CD39; (solutor) system are significated by removing the N- and C-terminal transmembrane domains. It constructed by removing the N- and C-terminal transmembrane domains. It constructed by removing the N- and C-terminal transmembrane domains. It constructed by removing the N- and C-terminal transmembrane domains. It can the ability to block and reverse ADP-induced platelet activation and recrit ment, including platelet aggregation. Soluble CD3 polypeptides recruitment, including platelet aggregation. Soluble CD3 polypeptides recruitment, including platelet aggregation, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preeclampsia, platelet-associated ischaemic disorders including lung, preeclampsia, platelet-associated ischaemic disorders including coronary, coronary and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DY7), pulmonary embolism (PS) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
New soluble CD39 polypeptides having apyrase activity, useful for inhibiting angiogenesis and treating unstable angina, myocardial infarction, stroke, coronary artery disease or injury.
                                                                                                                                                                                                                                                                          Claim 6; Page 111-112; 122pp; English

Jeacuence 55, Application US/09557800C

Patent No. 6476211

GENERAL INFORMATION:

APPLICANT: Ford, John

APPLICANT: Yeung, George

TITLE OF INVENTION: Polypeptides

FILE REFERENCE: 28110/36457

CURRENT APPLICATION NUMBER: US/09/557,800C

CURRENT PILING DATE: 2000-04-25

PRIOR PILING DATE: 2000-01-11

US-08-930-921-1

Sequence 1, Application US/08930921B

Patent No. 6287837

GENERAL INPORMATION:

APPLICANT: BEAUDOIN, Adrien R.

APPLICANT: BEAUDOIN, Adrien R.

TITLE OF INVENTION: THEREOF AND PROCESS OF PRODUCING THEREOF BY RECOMBINANT

TITLE OF INVENTION: TECHNOLOGY

TITLE OF INVENTION: TECHNOLOGY

FILE REFERENCE: ATP-DIPHOSPHOHYDROLASES-BRAUDOIN

CURRENT FILING DATE: 1998-01-02

BARLIER APPLICATION NUMBER: PCT/CA96/00223

BARLIER APPLICATION NUMBER: PCT/CA96/00223

BARLIER PETING DATE: 1996-04-10

NUMBER OF SEQ ID NOS: 8

SOFTWARE: PATENTING DATE: 2.0

SEQ DID NO 1

FIRE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF THE OF 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            188

US-US-145-U46-LIDESY
Sequence 11559, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPRENCE: CLOOU3307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/231,768
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 2007012
SOFTWARE: FastESQ for Windows Version 4.0
SEQ ID NO 11559

NyAlternate names: adenylpyrophosphatase; ATP-diphosphobydrolase
C.Species: Solamum tuberosum (potato)
C.Species: Solamum tuberosum (potato)
C.Date: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 09-Jul-2004
C.SAccession: JC4616; PC4147
C.Accession: JC4616; PC4147
C.Accession: JC4616; PC4147
C.Accession: JC4616; MUID: 9158985; PMID: 8579614
A; Recence number: JC4616; MUID: 96158985; PMID: 8579614
A; Recence number: JC4616
A; Molecule type: mRNA
A; Recession: JC4616
A; Molecule type: mRNA
A; Recession: PC4147
A; Molecule type: protein
A; Residues: 59-5;96-131;132-160;236-253;332-345 < HA2>
A; Experimental source: tubers
A; Experimental source: tubers
A; Experimental source: translated the codon GCA for residue 215 as Gly
C; Comment: This enzyme belongs to a family of E-type ArPases, and it catalyzes the hydro
C; Comment: This enzyme belongs to a family of a type ArPases, and it catalyzes the hydro
C; Comment: This enzyme belongs to a family of a type ArPases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AjGene: rropl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 15

A44073

guanosine-diphosphatase, (EC 3.6.1.42) - yeast (Saccharomyces cerevisiae)

N;Alternate names: protein YEL042**
C;Speciaes: Saccharomyces cerevisiae
C;Date: 21-Sep-1993 #sequence revision 18-Nov-1994 #text_change 09-Jul-2004
C;Accession: A40722; B40732; B30837; S50502
N;Alternate name; Protein YEL042**
C;Accession: A40732; B40732; B40732; S50502
A;Title: Guanosine diphosphatase is required for protein and sphingolipid glycosylation
A;Reference number: A40732; MUID:93308137; PMID:8391537
A;Accession: A40732
A;Note: sequence extracted from NUE! Dackbone (NUEIN:1349392; PIDN:AA34656.1; PID:93493

Cell Genet. 81:287-289(1998).

-i- FUNCTION: In the nervous system, could hydrolyze ATP and othe nucleotides to regulate purinergic neurotransmission. Could a be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-i- CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-i- COPACTOR: Requires calcium and magnesium (By similarity).

-i- SUBGNIT: Homodimer; disulfide-linked (By similarity).

-i- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Extracellular (Potential) Potential.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cytoplasmic (Potential)

Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

COFACTOR: Requires calcium and magnesium.

SUBGUIT: Homodalmer; disulfide-linked (By similarity).

SUBCELLULAR LOCATION: Integral membrane protein (Potential).

TISSUE SPECIFICITY: Expressed in primary neurons and astrocytes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               InterPro; IPR000007; GDA1_CD39_NTPase.
